

PITCH DECK

SpaceFinance

DePIN Node Financing on Creditcoin CC3

Ethereum Sepolia

Creditcoin CC3

Attestcoin USC

PROBLEM

Node operators are capital-rich, liquidity-poor

Spacecoin node operators invest real capital to run satellite ground station infrastructure.

01

Gradual revenue

Revenue arrives gradually via on-chain service fees.

02

Capital locked

Capital is locked in hardware — no liquidity.

03

Ignored by TradFi

Traditional finance ignores DePIN operators.

04

Ignored by DeFi

Existing DeFi lending ignores real-world revenue streams.

SOLUTION

Unlock liquidity without selling the asset

SpaceFinance lets node operators unlock liquidity without selling their assets.

BORROW

Lock ETH on Sepolia

→

USC proof

→

Receive mUSDF loan on CC3

REPAY

Repay from node revenue

→

USC proof

→

Collateral released

No bridges. No centralized oracles. Verified by Attestcoin Protocol.

Why Only Creditcoin

Remove one primitive, and the entire product falls apart:

A

Attestcoin Protocol (USC verify)

Trustless cross-chain proof, no bridge required.

B

Creditcoin CC3

Where Spacecoin node revenue lives (ReceiptClaimed events).

C

mUSDF

Stablecoin native to the CC3 ecosystem.

This product **cannot exist** on any other chain.

Two-Chain Design

ETHEREUM SEPOLIA

- CollateralVault
- NodeRegistry
- Chainlink ETH/USD

USC Proof (~8-10 min)

CREDITCOIN CC3

- SpaceFinance.verifyAndExecute()
- mUSDF disbursed

Live contracts on both chains. Full e2e verified.

USC Integration

USC `verify()` called at 3 points:

01

Node registration proof

Sepolia NodeRegistry event

02

Collateral lock proof

Sepolia WETH Transfer event

03

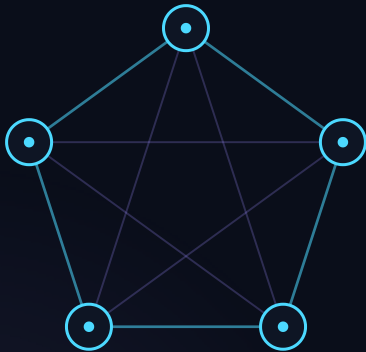

Repayment confirmation

Before collateral release

> EvmV1Decoder deployed on-chain, linked into SpaceFinance contract.

GuildPool

Inspired by the Grameen Bank microfinance model.

5

5-node operator mutual accountability pool

Partial risk sharing lowers collateral requirements for every member.

Sybil-proof

Requires real on-chain revenue history to join.

Anti-collusion

Guild freezes on member default.

TRACTION

Traction

- ✓ 4 smart contracts deployed on CC3 Testnet + Sepolia
- ✓ End-to-end flow verified on-chain
- ✓ Dynamic LTV via Chainlink ETH/USD
- ✓ Full React frontend live at spacefi.vercel.app
- ✓ Demo video: youtu.be/eSDE0DheM3w

Roadmap

PHASE 1

CURRENT

Testnet

Testnet deployment, manual collateral release.

PHASE 2

Automation

Automated release as USC expands source chain support.

PHASE 3

Live Revenue

Live Spacecoin Receipt Claimed revenue integration.

PHASE 4

Mainnet

Mainnet deployment on Creditcoin CC3.
